Topic dictionary

主次题型代码与完整名称

Secondary codes in the matrix refer to the complete names below.

Algebra

AL01	Equations & algebraic modeling
AL02	Polynomials & Vieta relations
AL03	Complex numbers & roots of unity
AL04	Logarithms & exponentials
AL05	Sequences & summation
AL06	Absolute values, floors & piecewise graphs
AL07	Inequalities & continuous optimization
AL08	Trigonometric algebra & equations
AL09	Functional constraints & iteration
AL10	Binomial expansions & controlled approximation

Geometry

GE01	Angles, similarity & parallel lines
GE02	Areas & area ratios
GE03	Triangle metrics & trigonometry
GE04	Circle power & cyclic geometry
GE05	Angle bisectors & triangle centers
GE06	Tangent circles & common tangents
GE07	Coordinates, vectors & transformations
GE08	Conics & analytic loci
GE09	Spheres & spatial distances
GE10	Volumes & solid geometry

Number Theory

NT01	Prime factorization & valuations
NT02	Divisibility, GCD & LCM
NT03	Congruences & Chinese remainders
NT04	Orders, modular powers & cycles
NT05	Diophantine equations & factor pairs
NT06	Number bases, digits & palindromes
NT07	Rational fractions & repeating decimals

Topic dictionary

主次题型代码与完整名称

Secondary codes in the matrix refer to the complete names below.

NT08	Divisor functions & totients

Counting & Combinatorics

CO01	Restricted permutations & arrangements
CO02	Subsets & binomial identities
CO03	Compositions, partitions & generating functions
CO04	Inclusion-exclusion & double counting
CO05	Recurrences, lattice paths & tilings
CO06	Graphs & geometric counting
CO07	Bijections & structural counting

Probability & Statistics

PS01	Finite probability & combinatorial sampling
PS02	Conditional probability & independence
PS03	Geometric probability
PS04	Expected values & stopping processes
PS05	Distributions & repeated trials
PS06	Data & descriptive statistics

Logic & Strategy

LO01	Games, invariants & state strategies
LO02	Discrete extrema & constructions
LO03	Constraint deductions & logical cases
